## Abstract

This assignment is written in literate programming style, generated by noweb, and rendered by LaTeX.

## 1 Question 1

Let  $n$  be a 3 tuple vector, and given that it is along  $V1$ . It is trivial that we can imply:

$$n = \frac{V1}{[|V1|, |V1|, |V1|]}$$

where  $|V1| = \sqrt{V1_x^2 + V1_y^2 + V1_z^2}$

Thus  $n$  is now known.

By the definition of cross product, denoted as  $\times$  here, knowing that  $V1$  and  $V2$  is non-collinear, we can also derive:

$$u = \frac{V2 \times V3}{[|V2 \times V3|, |V2 \times V3|, |V2 \times V3|]}$$

Finally, it is also trivial that:

$$v = u \times n$$
